

Kimba Inline

The Kimba Inline buggy is a mobility base for twins or siblings, who require positioning during transport. It can be combined with various seating solutions, seating shells, modular seating, Kimba Neo seat unit, Leckey Squiggles and Leckey Mygo systems.

The Kimba Inline twin buggy is easy to push and steer and as it is the same width as other buggies it therefore does not have problems with doorways. The positioning of the seats can be arranged to suit you with them either facing the direction travel, facing the parent or guardian or facing each other allowing the siblings to interact.

What is special about me?

- Seats position one behind the other
- Consistently narrow mobility base even with child growth
- Easy to operate in everyday life
- The frame length is adjustable to meet the needs of the children
- Children can sit in the direction of travel, facing the attendant for facing each other, by turning the seating units
