

Kimba Neo

The Kimba Neo combines maximum functionality while meeting the highest aesthetic criteria and providing numerous individual options. When in the buggy the child can actively experience the environment and train their motor skills. Parents can easily adapt the Kimba Neo to the needs of their child with a few simple adjustments with the tilt and recline functions.

The Kimba Neo also features suspension which allows the child to have a comfortable ride even over uneven ground. The seat unit can be either forward facing so the child can take in the surroundings while out, or it can be rear facing so the parent or guardian can see the child should that be required.

Standard Model
