

StimuLITE®

Classic, Contoured and Slimline XS Cushions For Extra SENSITIVE Skin

STIMULITE: EXTRA SENSITIVE CUSHIONS

Designed for people with sensitive skin, the *Stimulite Classic, Contoured and Slimline™ XS Cushions* feature a soft top layer of specially engineered honeycomb. The compliant honeycomb cells contour to body shape enabling bony protuberances to freely sink into the cushion while supporting the surrounding anatomy. The cells flex with movement to absorb shock and prevent tissue trauma.

Like all Stimulite cushions, the XS series provide *Total Pressure Management®*—*pressure relief, reduced shearing and ventilation* to control heat and moisture—combating the primary causes of pressure sores. Stimulite's unique ventilation system of perforated honeycomb cells circulates air and evaporates moisture to minimize humidity.

The *Stimulite Classic XS Cushion* is ideal for individuals who require a higher level of skin protection but have difficulty transferring on contoured surfaces, while the *Contoured XS Cushion* is designed for paraplegics, quadriplegics and other individuals requiring a higher level of positioning and pressure management. The *Slimline XS Cushion*, featuring a mild contour and low profile, is ideal for active people.

Made from an advanced medical-grade material, these *lightweight, machine-washable* cushions are naturally *antibacterial, antifungal, odor resistant and allergen free*. A breathable cover works with the perforated honeycomb to wick away moisture, keeping people cool, dry and comfortable.
